Band Heaters Will Burn You!

Here's why:

- Band heaters use extremely high wattage to heat a small surface area of a drum, inconsistently heating product.
- Inconsistent turn-dial thermostats cause products to overheat and burn, resulting in lost materials and profits.

Powerblanket drum heaters provide:

- Uniform heat throughout the entire blanket surface using our patented GreenHeat® technology.
- Insulated full-wrap design to keep the heat in, where it's supposed to be.
- Eliminate product waste by providing consistent uniform heat.

SPFA — “Low flux blanket-type heaters work well to maintain drum temperatures. Avoid use of band-type heaters or other high heat flux heaters.”

PRO SERIES

- Automatically adjusts to varying fluid levels
- Three individual heat zones (55 Gallon only)
- Thermostatic controller
- Temperature adjusts from ambient up to 145° F

RR SERIES

- Rapid ramp technology
- One uniform heat zone
- Quickly heats materials to pre-set 100° F
- Highly efficient design saves time and energy
